

Math. Subj. Class. (1991) : 41A15, 65D10

Key words : Bernstein polynomial, B-form, Bézier curve

Povzetek

Delo predstavlja pregled lastnosti Bernsteinovih polinomov v eni in več dimenzijah. V prvem poglavju so dokazane glavne lastnosti Bernsteinovih polinomov ene spremenljivke: kvaliteta aproksimacije s temi polinomi, rekurzivna formula, asimptotična formula, višanje stopnje in formule za odvajanje in integriranje. Drugo poglavje obsega posplošitev Bernsteinovih polinomov več spremenljivk na dva načina: na Bernsteinove polinome, dobljene s tenzorskim produktom, in Bernsteinove polinome, definirane nad simpleksi. Večina lastnosti iz prvega poglavja je prenešena na polinome nad simpleksi. Poudarek je na enostavnosti kontrole obnašanja na robovih simpleksa, in s tem možnosti uporabe pri sestavljanju odsekoma polinomskih funkcij. Zadnje poglavje zajema primere uporabe Bernsteinovih polinomov pri predstavitvi krivulj v ravnini in ploskev v prostoru.
